Number Mystery Cards

PRESENTATION: Ask your volunteer to think of any number from 1 to 63. Make sure the volunteer knows they have a completely free choice of any number. Show the volunteer the cards one at a time and have them tell you which cards contain their “thought of” number. As you do this separate the cards into two piles, one pile that contains their number and one pile that does not.

Casually look at the numbers at the **TOP LEFT CORNER** of each of the cards which contain the volunteer’s thought of number. It may be one card or all six, but is usually just two or three. Quickly add these numbers up in your head. **The sum of these numbers will be the volunteers thought of number!**

Math Tip: When adding up the numbers in the top left corner, it is easier to start with the larger numbers first then add the smaller numbers.

EXAMPLE: The spectator is thinking of a number and they indicate that their thought of number appears on three of the cards. The numbers at the upper left hand corner of these three cards are 1, 2, and 32. Start with the 32, then add the 2, and finally the 1. In this example, the thought of number is 35!

To end the trick, have the volunteer concentrate on this thought of number. ‘Pretend’ to receive some mental thoughts and reveal the number they are thinking of! Have Fun!

Number Mystery Cards

COPY INSTRUCTIONS: Using a copy machine, copy this page and print it out. If you can print these out on card stock even better. Once these cards have been printed, cut them out along the dotted lines. (If you can have your client cut them out even better!) You will end up with six cards that will give you the ability to read minds!
